Abdulhameed Oreagba — CV

Full-Stack Developer · Mechatronics Engineering student, LASUSTECH (expected 2028) · Lagos, Nigeria

abdulhamidore1@gmail.com · +234 916 180 0594 · abdurore.tech · github.com/abdurore · linkedin.com/in/abdurore

Profile

Full-stack developer with 2+ years shipping web products to real users: a live four-app delivery platform, two e-commerce sites with payment flows, and a payments-enabled greeting card platform I co-founded. I work from React and Next.js interfaces through Node, NestJS and Laravel backends to deployment, and I test for WCAG 2.1 AA accessibility. Open to remote, part-time and internship roles.

Experience

Webmaster & Super Admin — Halal and Haram Distinction Development Initiative (HDI) · Aug 2026 – Present · halalcert.com.ng

- Maintain and improve the live public site of a halal certification body under a formal six-month engagement
- Made the JavaScript-loaded news feed crawlable and added per-page meta, sitemap, robots.txt and JSON-LD structured data
- Added slide reordering to the admin panel, refactored inline CSS into a shared stylesheet, and fixed broken images across live pages
- Manage social media; recovered the organisation's locked Instagram account

Full-Stack Developer — Jaayorun · Aug 2026 – Present

- Fix bugs and ship features on a production Laravel/PHP delivery platform with four connected apps: vendor, customer, rider and staff
- Taking over day-to-day ownership of the codebase from the senior developer; run and test the full stack locally in Docker

Freelance Full-Stack Developer — Upwork, DataAnnotation & direct clients · Jan 2026 – Present

- Deliver client builds end to end, from scoping to deployment: e-commerce, an ML-backed web app and business sites (see Projects)
- Complete AI training and code-evaluation tasks

SIWES Industrial Trainee — KDS Engineering, Lagos · 2026

- Assist with fabrication and wiring of industrial control panels (MCCBs, contactors, overload relays)
- Building the firm's first website: a single-file prototype and a multi-page Next.js version

AutoCAD Intern — Architectural firm, Lagos · 2024

- Produced architectural drafts in AutoCAD with the design team

Projects

Cardora — Co-founder & Full-Stack Developer · Late 2025 – Present (pre-launch) · cardora.studio · React, Tailwind CSS, Node.js, Flutterwave, Paystack

- WhatsApp-first digital greeting card and gifting platform for the Nigerian market; built the React frontend and contribute to the Node.js backend
- Integrated Flutterwave and Paystack for three subscription tiers and an in-app currency; fixed duplicate payment confirmations by making the verify-plus-webhook flow idempotent
- Designed a cinematic card-opening sequence (3D envelope, staggered reveal, tilt) on CSS design tokens

Ibro Pharmacy — Full-Stack Developer · ibro-pharmacy.vercel.app · Next.js, Express, Node.js, Tailwind CSS

- Pharmacy e-commerce for same-day Lagos delivery: category shop, cart and checkout, prescription upload and tracking, and an Ask-a-Pharmacist chat
- Next.js frontend backed by an Express API hosted on Render

Euphorium — Full-Stack Developer · 2026 – Present · Next.js, NestJS, Supabase/PostgreSQL

- Building a social-commerce Telegram Mini App for an early-stage startup: social feed, seller profiles, tiered seller verification and direct messages

Halal Meats — Developer · halal-meats.vercel.app · Next.js, Tailwind CSS, webhooks

- Halal meat ordering platform with an admin dashboard for batches and orders, and payment verification through webhooks

PreventAI — Cavista Hackathon 2026 · demo · code · React, FastAPI, Groq (Llama 3.1)

- Built in 24 hours with a team: a preventive-health assistant whose FastAPI backend scores risk from 0 to 100 and returns LLM-generated advice

Student Performance Prediction System — Client project · Python, scikit-learn, Next.js

- Trained a scikit-learn model that flags at-risk students and served its predictions and charts through a Next.js frontend

Accessibility audit scanner · Playwright, axe-core, NVDA

- Built an automated WCAG 2.1 AA scanner that I pair with manual keyboard and NVDA screen-reader testing to produce severity-ranked audit reports

Skills

- **Languages:** JavaScript, TypeScript, Python, PHP, HTML, CSS
- **Frontend:** React, Next.js, Tailwind CSS, design tokens
- **Backend & data:** Node.js, Express, NestJS, Laravel, FastAPI, Supabase/PostgreSQL, MongoDB
- **DevOps & tools:** Docker, Git/GitHub, Vercel, Netlify, Render, cPanel
- **Accessibility & SEO:** WCAG 2.1 AA, Playwright, axe-core, NVDA, technical SEO
- **AI:** LLM integration (Groq, Hugging Face), scikit-learn, prompt engineering
- **Other:** AutoCAD, video editing

Education & Programs

B.Eng. Mechatronics Engineering — Lagos State University of Science and Technology (LASUSTECH) · Third year · Expected 2028

- Minor in Computer Software and Media Applications

BoyCode Bootcamp 5.0 — Stellar Initiative · June 2026

- Competitive, fully funded residential bootcamp in Lagos, with a six-month virtual follow-up

Certifications: Anthropic Claude 101 · Anthropic AI Fluency · DHS Trusted Tester for Web (in progress)

Also: I write, edit and publish Simplivide, a science and engineering YouTube Shorts channel.
